THE ACCESS CONTROL PREREQUISITE  
FOR COMPLETE INTEGRATED PROTECTION

### Complete Integrated Protection

Precision Edge EdgeAccess™ Access brings together complete hardware and software capabilities for effective access control. EdgeAccess package combines EdgeController™ hardware, EdgeConnector™ modules, and EdgeAlerts™ software for fully integrated event monitoring and management. It's a comprehensive package for access control, and an integral part of the EdgeProtect™ solution for complete integrated protection.

### Part of the Precision EdgeProtect Solution for Complete Access Control

EdgeAccess is part of EdgeProtect, the industry's only complete and completely integratable access control solution. EdgeProtect delivers comprehensive, integrated capabilities including:

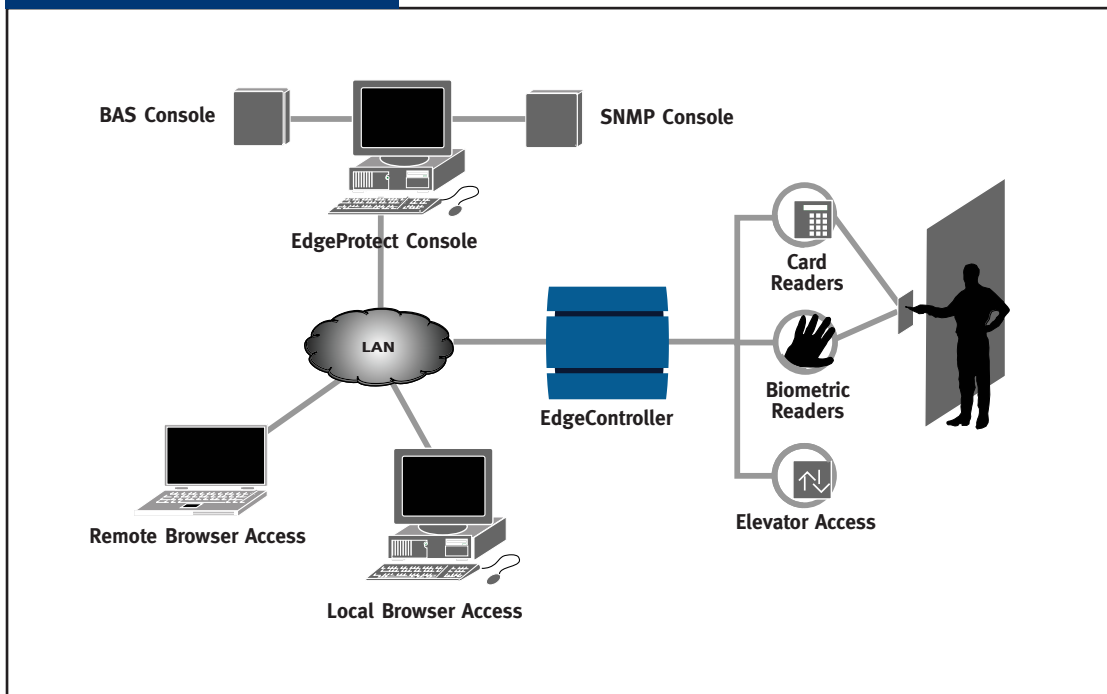

- EdgeAccess control including EdgeManager event monitoring and management
- EdgeView integrated digital video

### A Highly Scalable, Flexible Hardware Package

EdgeController hardware and EdgeConnector modules come together to deliver broad, flexible functionality, along with the ability to easily scale as an organization's access control needs change. Capable of accommodating a variety of function-specific EdgeConnector modules, the EdgeController provides the flexibility to meet the broadest range of dynamic requirements.

- Open architecture and network connectivity make it easy to start with as little as one door connector module and one controller—and then increase functionality as needed.
- It's easy to scale up to hundreds of doors, inputs and outputs by simply adding controllers and application-specific software to the network environment.
- EdgeController hardware works with a wide variety of industry-standard readers, keys, and other access control devices.

#### SYSTEM ARCHITECTURE

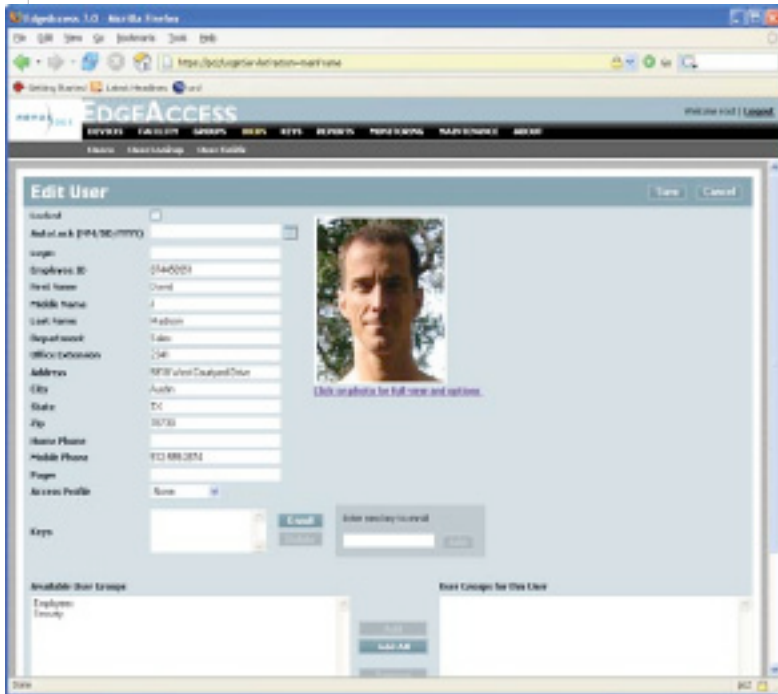

**THE ACCESS CONTROL PREREQUISITE FOR COMPLETE INTEGRATED PROTECTION**

**A Streamlined, Fully Integrated Software Solution**

No other software for access control delivers one streamlined view of every aspect of the controlled environment in a solution that's easy to integrate with existing BAS and IT management consoles. The EdgeProtect software features an intuitive graphical interface and sophisticated graphical maps that deliver real-time, integrated information from access controllers, digital video, and other inputs throughout the secured environment.

- IP-enabled hardware enables the environment to be monitored and managed from anywhere using a standard Web browser.
- Real-time information enables the fastest possible response capability.
- The software supports delivery of immediate alerts about events to user-identified personnel via various methods including pagers and e-mail.

Only Precision Edge has the combination of integrated protection solutions, building automation partnerships, and enterprise IT experience essential to success in today's increasingly converging physical security and cyber security environments. Our large installed base includes building automation and integrated protection systems for government, retail, healthcare, education, and industry.
